Forest Science

Volume 19, 1973

William E. Miller — *Editor*

H. R. Glascock, Jr. — *Associate Editor*

R. Keith Arnold — *Associate Editor*

Harry A. Fowells — *Staff Editor*

Nancy Hill — *Business Manager*

FOREST SCIENCE is published quarterly by the Society of American Foresters with the cooperation of forestry research and educational organizations.

The journal assumes no responsibility for the statements and opinions expressed by contributors. The editors cannot be responsible for loss or damage of manuscripts and accompanying matter.

Correspondence concerning manuscripts submitted for publication should be addressed to Dr. William E. Miller, U. S. North Central Forest Experiment Station, Folwell Ave., St. Paul, Minn. 55101.

Other correspondence, including subscriptions, remittances, reprint orders, proof, and inquiries concerning the status of manuscripts accepted for publication should be addressed to the Society of American Foresters, 1010 16th Street, N.W., Washington, D.C. 20036.

For all subscribers except members of the Society of American Foresters, subscription price, which includes any *Forest Science Monographs* issued during the year, is $10.00 per year postpaid to the U. S. and Canada, and $11.00 to other destinations for complete volumes. For Society members the respective prices are $6.00 and $7.00. A single number is $3.00 for *Forest Science* and $2.00 for a *Monograph*.

Missing issues covered by paid subscription will be replaced without charge if claim is made within 90 days after date of issue for addresses in the U. S. and Canada; elsewhere within 7 months. Otherwise payment of the single-issue price will be required.

The pages of FOREST SCIENCE are open to all qualified contributors. Preference will be given to papers dealing with (a) basic research, (b) research techniques and procedures, and (c) subjects fundamental to forestry such as forest soils, forest tree physiology, forest genetics, biometrics, theoretical forest economics, wood anatomy and chemistry, forest insects, and the diseases of forest trees. A charge of $35 per page to cover printing costs (but not editorial or distribution costs, or costs of reprints) will be made against the author or his agency.

Table of Contents, Volume 19

Number 1, March 1973

The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands ..... *L. V. Pienaar, K. J. Turnbull* 2

Patterns of soil moisture depletion in a mixed oak stand ..... *James H. Brown, Jr., Thomas G. Bourn* 23

Growth data for 29 years from the California elevational transect study of ponderosa pine ..... *M. Thompson Conkle* 31

An econometric analysis of the Wisconsin aspen pulpwood market ..... *William A. Leuschner* 41

Incompatibility between *Picea pungens* Engelm. and *Picea engelmannii* Parry ..... *Susan V. Kossuth, Gilbert H. Fechner* 50

Structural analysis of Japanese-North American trade in forest products ..... *William McKillop* 63

Notes

Effects of elevation and seed source on tracheid length in young ponderosa pine ..... *R. M. Echols* 46

A simple optical device for measuring vertical projection of tree crowns ..... *M. T. Jackson, R. O. Petty* 60

Spread of *Fomes annosus* reduced by heavy application of sulfur ..... *R. C. Froelich, J. D. Nicholson* 75

Drought crack on western white pine in northern Idaho ..... *Roger D. Hungerford* 77

Review

Ecology of soil fungi. *Reviewed by James M. Trappe* 40

Number 2, June 1973

An econometric model of the United States forest products industry ..... *F. Gerard Adams, John Blackwell* 82

Quantifying diameter distributions with the Weibull function ..... *Robert L. Bailey, T. R. Dell* 97

Development of weight variation in Douglas-fir seedlings ..... *W. A. Sinclair* 105

Effect of the pine needle scale on photosynthesis of Scots pine ..... *John D. Walstad, David G. Nielsen, Norman E. Johnson* 109

Genotype-environment interaction in North Central United States ..... *Jonathan W. Wright* 113

Goal programming for forest management ..... *David B. Field* 125

Allelopathic relationship between yellow birch and sugar maple seedlings ..... *Carl H. Tubbs* 139

Variation in the monoterpene composition of two oleoresin systems of loblolly pine ..... *D. L. Rockwood* 147

Notes

Bedding and fertilization influence on slash pine development in the Florida Sandhills ..... *James B. Baker* 135

Phenol-oxidizing enzymes in the heartwood of *Pinus radiata* ..... *Louis Shain, J. F. Graham Mackay* 153

Reviews

Viability of seeds. *Reviewed by Te May Ching* 112

Biology of rust resistance in forest trees. *Reviewed by Roger S. Peterson* 124

Phloem transport in plants. *Reviewed by Philip R. Larson* 146

Mineral nutrition of plants: Principles and perspectives. *Reviewed by Torsten Ingestad* 156

Lignins: Occurrence, formation, structure and reactions. *Reviewed by Karl E. Wolter* 160

List of Manuscript Reviewers, 1972 157

Number 3, September 1973

Numerical behavior of a gypsy moth population system ..... *Robert W. Campbell* 162

Growth stress differences in eucalypts ..... *J. E. Nicholson* 169

Relation of sap and sugar yields to physical characteristics of sugar maple trees ..... *Barton M. Blum* 175

Delimiting regional sub-areas for studies of timber-resource-based activity in the Northeast ..... *Owen W. Herrick* 180

Differential response of *Poria weirii* to phenolic acids from Douglas-fir and red alder roots ..... *James M. Trappe, C. Y. Li, K. C. Lu, W. B. Bollen* 191

Intensive cultural practices increase growth of juvenile slash pine in Florida sandhills ..... *James B. Baker* 197

Forest succession models: a rationale and methodology for modeling forest succession over large regions ..... *H. H. Shugart, Jr., T. R. Crow, J. M. Hett* 203

Food reserves of Engelmann spruce planting stock ..... *Frank Ronco* 213

Response of Douglas-fir and western hemlock seedlings to lime ..... *Paul Heilman, Gordon Ekuan* 220

Root adaptations and relative flood tolerance of five hardwood species ..... *Donal D. Hook, Claud L. Brown* 225

Notes

A transducer for investigations of diameter growth ..... *Russell S. Kinerson, Jr.* 230

Remeasuring tree heights on permanent plots using rectangular coordinates and one angle per tree ..... *Robert L. Neal, Jr.* 233

Early flowering in ailanthus ..... *Peter P. Feret* 237

Reviews

Isotopes and radiation in soil-plant relationships including forestry. *Reviewed by Philip R. Larson* 168

Soil physics (Fourth edition). *Reviewed by Stanley P. Gessel* 179

A textbook of plant virus diseases (Third edition). *Reviewed by Carl E. Seliskar* 189

Utilization of southern pines. *Reviewed by Fred W. Taylor* 239

Announcements

Interdisciplinary symposium on advanced concepts and techniques in the study of snow and ice resources 174

Use of metric system in *Forest Science* 240

Number 4, December 1973

Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius* ..... *Jerry W. Riffle* 242

Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status ..... *James P. Lassoie* 251

A 28-meter Douglas-fir in a weighing lysimeter ..... *Leo J. Fritschen, Lloyd Cox, Russell Kinerson* 256

Genetic control of sulfur dioxide and ozone tolerance in eastern white pine ..... *D. B. Houston, G. R. Stairs* 267

Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures ..... *P. H. Cochran, Carl M. Berntsen* 272

Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings ..... *J. G. McColl* 281

Heat-pulse velocity and bordered pit condition in living Engelmann spruce and lodgepole pine trees ..... *Walter R. Mark, Donald L. Crews* 291

Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination ..... *Ching Kao* 297

A Markov model for stand projection ..... *L. M. Peden, J. S. Williams, W. E. Frayer* 303

Notes

Morphology of conifer pollen as revealed by the scanning electron microscope ..... *James W. Hanover* 263

July-stimulated flowering in Douglas-fir ..... *Roy R. Silen* 288

Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili ..... *W. D. Boyer, F. W. Woods* 315

Reviews

Lectures on photomorphogenesis. *Reviewed by John A. Romberger* 262

Systems analysis and simulation in ecology, Volume 2. *Reviewed by H. A. I. Madgwick* 266

Seedlings of some tropical trees and shrubs mainly of South East Asia. *Reviewed by Thomas H. Schubert* 280

Key-Word Index 319

Author Index 324

Key-Word Index

Abies homolepis
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**

Acer saccharum
Allelopathic relationship between yellow birch and sugar maple seedlings. **19:139**
Relation of sap and sugar yields to physical characteristics of sugar maple trees. **19:175**

Ailanthus altissima
Early flowering in ailanthus. **19:237**

air pollution
Genetic control of sulfur dioxide and ozone tolerance in eastern white pine. **19:267**

air temperature
Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures. **19:272**

alder, red (*see* ***Alnus rubra***)

Alnus rubra
Differential response of *Poria weirii* to phenolic acids from Douglas-fir and red alder roots. **19:191**

Amanita muscaria
Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius.* **19:242**

aspen, bigtooth (*see* ***Populus grandidentata***)

aspen, quaking (*see* ***Populus tremuloides***)

basal area estimation
The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands. **19:2**

Betula alleghaniensis
Allelopathic relationship between yellow birch and sugar maple seedlings. **19:139**

birch, yellow (*see* ***Betula alleghaniensis***)

carbohydrate reserves (*see* **food reserves**)

Chinese fir (*see* ***Cunninghamia lanceolata***)

cluster analysis
Delimiting regional sub-areas for studies of timber-resource-based activity in the Northeast. **19:180**

costs and returns
Goal programming for forest management. **19:125**

cover types
Forest succession models: a rationale and methodology for modeling forest succession over large regions. **19:203**

crown structure
A simple optical device for measuring vertical projection of tree crowns. **19:60**

cultural practices
Bedding and fertilization influence on slash pine development in the Florida sandhills. **19:135**
Intensive cultural practices increase growth of juvenile slash pine in Florida sandhills. **19:197**

Cunninghamia lanceolata
Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination. **19:297**

decay resistance (*see* **woodrots**)

disease control
Differential response of *Poria weirii* to phenolic acids from Douglas-fir and red alder roots. **19:191**
Spread of *Fomes annosus* reduced by heavy application of sulfur. **19:75**

Douglas-fir (*see* ***Pseudotsuga menziesii***)

drought resistance, -effects
Drought crack on western white pine in northern Idaho. **19:77**

econometric model
Delimiting regional sub-areas for studies of timber-resource-based activity in the Northeast. **19:180**
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**
An econometric model of the United States forest products industry. **19:82**
Goal programming for forest management. **19:125**
Structural analysis of Japanese-North American trade in forest products. **19:63**

enzymes
Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination. **19:297**
Phenol-oxidizing enzymes in the heartwood of *Pinus radiata.* **19:153**

Eucalyptus obliqua
Growth stress differences in eucalypts. **19:169**

Eucalyptus regnans
Growth stress differences in eucalypts. **19:169**

evapotranspiration (*see* **transpiration**)

exports
Structural analysis of Japanese-North American trade in forest products. **19:63**

fertilizers, fertilization
Bedding and fertilization influence on slash pine development in the Florida sandhills. **19:135**
Intensive cultural practices increase growth of juvenile slash pine in Florida sandhills. **19:197**
Response of Douglas-fir and western hemlock seedlings to lime. **19:220**
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**

fir, Hokkaido (*see* ***Abies homolepis***)

flooding effects
Root adaptations and relative flood tolerance of five hardwood species. **19:225**

flowering and fruiting
Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili. **19:315**
Early flowering in ailanthus. **19:237**
July-stimulated flowering in Douglas-fir. **19:288**

Fomes annosus
Spread of *Fomes annosus* reduced by heavy application of sulfur. **19:75**

food reserves
Food reserves of Engelmann spruce planting stock. **19:213**

forest succession
Forest succession models: a rationale and methodology for modeling forest succession over large regions. **19:203**
Fraxinus pennsylvanica
Root adaptations and relative flood tolerance of five hardwood species. **19:225**
frost damage (*see* **weather effects**)
Fusarium oxysporum
Development of weight variation in Douglas-fir seedlings. **19:105**

genetic variation
Genetic control of sulfur dioxide and ozone tolerance in eastern white pine. **19:267**
Genotype-environment interaction in North Central United States. **19:113**
Variation in the monoterpene composition of two oleoresin systems of loblolly pine. **19:147**
geographic variation
Genotype-environment interaction in North Central United States. **19:113**
gypsy moth (*see* ***Porthetria dispar***)

hemlock, western (*see* ***Tsuga heterophylla***)
hybrids, hybridization
Incompatibility between *Picea pungens* Engelm. and *Picea engelmannii* Parry. **19:50**
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**

inhibitors
Allelopathic relationship between yellow birch and sugar maple seedlings. **19:139**

Lactarius deliciosus
Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius.* **19:242**
lime (*see* **fertilizers**)
linear programming
Goal programming for forest management. **19:125**
Liquidambar styraciflua
Root adaptations and relative flood tolerance of five hardwood species. **19:225**
Liriodendron tulipifera
Root adaptations and relative flood tolerance of five hardwood species. **19:225**
lysimeter (*see* **research techniques**)

maple sap
Relation of sap and sugar yields to physical characteristics of sugar maple trees. **19:175**
maple, sugar (*see* ***Acer saccharum***)
maple sugar
Relation of sap and sugar yields to physical characteristics of sugar maple trees. **19:175**
markets
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**
An econometric model of the United States forest products industry. **19:82**
Structural analysis of Japanese-North American trade in forest products. **19:63**
mathematical models
The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands. **19:2**
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**
An econometric model of the United States forest products industry. **19:82**
Forest succession models: a rationale and methodology for modeling forest succession over large regions. **19:203**
Goal programming for forest management. **19:125**
A Markov model for stand projection. **19:303**
Quantifying diameter distributions with the Weibull function. **19:97**
Structural analysis of Japanese-North American trade in forest products. **19:63**
measurement techniques
Remeasuring tree heights on permanent plots using rectangular coordinates and one angle per tree. **19:233**
A simple optical device for measuring vertical projection of tree crowns. **19:60**
A transducer for investigations of diameter growth. **19:230**
moisture stress (*see* **plant water stress**)
mycorrhizae
Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius.* **19:242**

nematodes
Development of weight variation in Douglas-fir seedlings. **19:105**
nursery practice
Food reserves of Engelmann spruce planting stock. **19:213**
nutrition, tree
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
Nyssa aquatica
Root adaptations and relative flood tolerance of five hardwood species. **19:225**

oak, scarlet (*see* ***Quercus coccinea***)
oak, white (*see* ***Quercus alba***)
oleoresins
Variation in the monoterpene composition of two oleoresin systems of loblolly pine. **19:147**

pest control
Numerical behavior of a gypsy moth population system. **19:162**
Phenacaspis pinifoliae
Effect of the pine needle scale on photosynthesis of Scots pine. **19:109**
phosphate, phosphorus (*see* **fertilizers**)
photosynthesis
Effect of the pine needle scale on photosynthesis of Scots pine. **19:109**
Picea abies
The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands. **19:2**
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**

Picea engelmannii
Food reserves of Engelmann spruce planting stock. **19:213**
Heat-pulse velocity and bordered pit condition in living Engelmann spruce and lodgepole pine trees. **19:291**
Incompatibility between *Picea pungens* Engelm. and *Picea engelmannii* Parry. **19:50**
Picea glauca
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Picea pungens
Incompatibility between *Picea pungens* Engelm. and *Picea engelmannii* Parry. **19:50**
pine, Austrian (*see* ***Pinus nigra***)
pine, eastern white (*see* ***Pinus strobus***)
pine, jack (*see* ***Pinus banksiana***)
pine, Japanese red (*see* ***Pinus densiflora***)
pine, loblolly (*see* ***Pinus taeda***)
pine, lodgepole (*see* ***Pinus contorta***)
pine, longleaf (*see* ***Pinus palustris***)
pine, Monterey (*see* ***Pinus radiata***)
pine, pitch (*see* ***Pinus rigida***)
pine, Scots (*see* ***Pinus sylvestris***)
pine, slash (*see* ***Pinus elliottii***)
pine, Taiwan red (*see* ***Pinus taiwanensis***)
pine, Virginia (*see* ***Pinus virginiana***)
pine, western white (*see* ***Pinus monticola***)
Pinus banksiana
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Pinus contorta
Heat-pulse velocity and bordered pit condition in living Engelmann spruce and lodgepole pine trees. **19:291**
Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures. **19:272**
Pinus densiflora
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Pinus elliottii
Bedding and fertilization influence on slash pine development in the Florida sandhills. **19:135**
The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands. **19:2**
Intensive cultural practices increase growth of juvenile slash pine in Florida sandhills. **19:197**
Spread of *Fomes annosus* reduced by heavy application of sulfur. **19:75**
Pinus monticola
Drought crack on western white pine in northern Idaho. **19:77**
Pinus nigra
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Pinus palustris
Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili. **19:315**
Pinus ponderosa
Effects of elevation and seed source on tracheid length in young ponderosa pine. **19:46**
Growth data for 29 years from the California elevational transect study of ponderosa pine. **19:31**
Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius.* **19:242**
Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures. **19:272**
Pinus radiata
Phenol-oxidizing enzymes in the heartwood of *Pinus radiata.* **19:153**
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
Pinus rigida
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
Pinus strobus
Genetic control of sulfur dioxide and ozone tolerance in eastern white pine. **19:267**
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Pinus sylvestris
Effect of the pine needle scale on photosynthesis of Scots pine. **19:109**
Pinus taeda
Spread of *Fomes annosus* reduced by heavy application of sulfur. **19:75**
Variation in the monoterpene composition of to oleoresin systems of loblolly pine. **19:147**
Pinus taiwanensis
Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination. **19:297**
Pinus virginiana
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
plant chemistry (*see also* **wood tissue analysis, foliar analysis**)
Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination. **19:297**
Response of Douglas-fir and western hemlock seedlings to lime. **19:220**
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
Variation in the monoterpene composition of two oleoresin systems of loblolly pine. **19:147**
plant water stress, -deficit
Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status. **19:251**
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
Platanus occidentalis
Root adaptations and relative flood tolerance of five hardwood species. **19:225**
pollination
Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili. **19:315**
Populus grandidentata
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**
Populus tremuloides
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**

Poria weirii
Differential response of *Poria weirii* to phenolic acids from Douglas-fir and red alder roots. **19:191**
Porthetria dispar
Numerical behavior of a gypsy moth population system. **19:162**
price analysis
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**
An econometric model of the United States forest products industry. **19:82**
Structural analysis of Japanese-North American trade in forest products. **19:63**
progeny testing
Genotype-environment interaction in North Central United States. **19:113**
Growth data for 29 years from the California elevational transect study of ponderosa pine. **19:31**
provenance
Effects of elevation and seed source on tracheid length in young ponderosa pine. **19:46**
Genotype-environment interaction in North Central United States. **19:113**
Growth data for 29 years from the California elevational transect study of ponderosa pine. **19:31**
Pseudotsuga menziesii
Development of weight variation in Douglas-fir seedlings. **19:105**
Differential response of *Poria weirii* to phenolic acids from Douglas-fir and red alder roots. **19:191**
July-stimulated flowering in Douglas-fir. **19:288**
Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status. **19:251**
Response of Douglas-fir and western hemlock seedlings to lime. **19:220**
A 28-meter Douglas-fir in a weighing lysimeter. **19:256**
pulpwood
An econometric analysis of the Wisconsin aspen pulpwood market. **19:41**

Quercus alba
Patterns of soil moisture depletion in a mixed oak stand. **19:23**
Quercus coccinea
Patterns of soil moisture depletion in a mixed oak stand. **19:23**

research techniques
Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status. **19:251**
Genotype-environment interaction in North Central United States. **19:113**
Heat-pulse velocity and bordered pit condition in living Engelmann spruce and lodgepole pine trees. **19:291**
Morphology of conifer pollen as revealed by the scanning electron microscope. **19:263**
Remeasuring tree heights on permanent plots using rectangular coordinates and one angle per tree. **19:233**
Soil moisture influence on growth, transpiration, and nutrient uptake of pine seedlings. **19:281**
A transducer for investigations of diameter growth. **19:230**
A 28-meter Douglas-fir in a weighing lysimeter. **19:256**
research tools, -instruments
A simple optical device for measuring vertical projection of tree crowns. **19:60**
root growth
Root adaptations and relative flood tolerance of five hardwood species. **19:225**

seed orchards
July-stimulated flowering in Douglas-fir. **19:288**
seed physiology
Biochemical changes in seeds of Taiwan red pine and Chinese fir during germination. **19:297**
seed source (*see* **provenance**)
seedling development
Development of weight variation in Douglas-fir seedlings. **19:105**
Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures. **19:272**
sampling methods
A simple optical device for measuring vertical projection of tree crowns. **19:60**
soil moisture
Patterns of soil moisture depletion in a mixed oak stand. **19:23**
Drought crack on western white pine in northern Idaho. **19:77**
Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status. **19:251**
spruce, Colorado blue (*see* ***Picea pungens***)
spruce, Engelmann (*see* ***Picea engelmannii***)
spruce, Norway (*see* ***Picea abies***)
spruce, white (*see* ***Picea glauca***)
stand growth, -yield
The Chapman-Richards generalization of von Bertalanffy's growth model for basal area growth and yield in even-aged stands. **19:2**
A Markov model for stand projection. **19:303**
stand projection (*see* **stand growth**)
stand structure
A Markov model for stand projection. **19:303**
Quantifying diameter distributions with the Weibull function. **19:97**
stem flow
Patterns of soil moisture depletion in a mixed oak stand. **19:23**
Suillus granulatus
Pure culture synthesis of ectomycorrhizae on *Pinus ponderosa* with species of *Amanita, Suillus,* and *Lactarius.* **19:242**
sycamore, American (*see* ***Platanus occidentalis***)

temperature, air (*see* **air temperature**)
terpenes
Variation in the monoterpene composition of two oleoresin systems of loblolly pine. **19:147**
timber resource
Delimiting regional sub-areas for studies of timber-resource-based activity in the Northeast. **19:180**
tracheid length (*see* **wood properties**)

transpiration
Diurnal dimensional fluctuations in a Douglas-fir stem in response to tree water status. **19:251**
A 28-meter Douglas-fir in a weighing lysimeter. **19:256**
tree breeding
Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili. **19:315**
Early flowering in ailanthus. **19:237**
Effects of elevation and seed source on tracheid length in young ponderosa pine. **19:46**
Genetic control of sulfur dioxide and ozone tolerance in eastern white pine. **19:267**
Genotype-environment interaction in North Central United States. **19:113**
Growth data for 29 years from the California elevational transect study of ponderosa pine. **19:31**
Incompatibility between *Picea pungens* Engelm. and *Picea engelmannii* Parry. **19:50**
July-stimulated flowering in Douglas-fir. **19:288**
tree taper, -form
Growth stress differences in eucalypts. **19:169**
Tsuga heterophylla
Response of Douglas-fir and western hemlock seedlings to lime. **19:220**
weather effects
Date of pollen shedding by longleaf pine advanced by increased temperatures at strobili. **19:315**
Tolerance of lodgepole and ponderosa pine seedlings to low night temperatures. **19:272**
wood properties
Effects of elevation and seed source on tracheid length in young ponderosa pine. **19:46**
Growth stress differences in eucalypts. **19:169**
woodrots
Phenol-oxidizing enzymes in the heartwood of *Pinus radiata*. **19:153**
wood structure
Drought crack on western white pine in northern Idaho. **19:77**
Heat-pulse velocity and bordered pit condition in living Engelmann spruce and lodgepole pine trees. **19:291**
Phenol-oxidizing enzymes in the heartwood of *Pinus radiata*. **19:153**
